

SUMMARY

Software Engineer with ~ 1 year of experience building scalable full-stack and AI-powered applications using Java, Spring Boot, React.js, Generative AI, and Retrieval-Augmented Generation (RAG).

EXPERIENCE

- **MetLife** | Software Engineer Aug'25–Present
Java, Spring Boot, React.js, DB2 Hyderabad
 - Migrated VB.NET monolith components to Spring Boot microservices with React.js, reducing onboarding time by ~ 70 % and increasing throughput by 2–3x.
 - Integrated iLink, CDF, and SoldCase workflows into the GCA platform, improving scalability.
 - Developed REST APIs using Spring Boot and DB2, enhancing data accuracy through validation workflows.
 - Built reusable React.js components and optimized data flows for better maintainability.
- **Turing** | LLM Trainer Jul'25
C++, Algorithms Remote
 - Designed 6 adversarial algorithmic benchmarks with C++ solutions and test suites to evaluate LLM capabilities.
 - Conducted ~ 15 model evaluations per benchmark to identify reasoning gaps and optimization failures.
 - Developed complex DSA problems with constraints, edge cases, and reference implementations for benchmarking.
 - Analyzed AI-generated code for correctness, complexity, and scalability across algorithmic scenarios.
- **Zeus Numerix** | SDE Intern May'24 – Jul'24
C++, Qt, QML Pune
 - Developed a Qt/QML-based PGK Simulation prototype with C++ backend logic for cross-platform validation.
 - Tested application compatibility across 4 platforms: Windows, Linux, Android, and Raspberry Pi.
 - Built reusable and responsive UI components using Qt Creator and Qt Design Studio.

PROJECTS

- **RAG-Based Video Learning Assistant** | Python, LLM, RAG Feb'26–Mar'26
RAG-powered system for context-aware video search
 - Engineered a RAG-based video learning assistant for semantic search and contextual Q&A.
 - Built a transcript pipeline for a 45-video course with extraction, chunking, embedding, and vector indexing.
 - Implemented bge-m3 embeddings with vector similarity search for efficient content retrieval.
 - Integrated LLaMA with retrieved context for grounded response generation.
 - Improved response quality through chunk merging and LLM tuning.
 - [GitHub](#) | [Demo Video](#)
- **AI-Powered News Research Assistant** | Python, LangChain Jan'26–Feb'26
AI-powered news research and semantic retrieval system
 - Built an AI-powered news assistant enabling contextual Q&A over user-provided news URLs.
 - Developed a RAG pipeline using LangChain, OpenAI embeddings, and FAISS for document retrieval.
 - Implemented source-grounded LLM responses using retrieved context from multiple news articles.
 - [GitHub](#) | [Demo Video](#)

TECHNICAL SKILLS

Programming : Python, Java, C++, C, JavaScript, SQL
AI/ML : Generative AI, LLMs, RAG, Machine Learning, Deep Learning, NLP
Frameworks & Libraries : Spring Boot, React.js, LangChain, Scikit-learn, Pandas, NumPy
Databases : MongoDB, MySQL
CS Fundamentals : Data Structures & Algorithms, OOP, System Design, Computer Networks

EDUCATION

- **Visvesvaraya National Institute of Technology, Nagpur** 2021–2025
B.Tech. in Mechanical Engineering CGPA: 8.45/10

CERTIFICATIONS & ACHIEVEMENTS

- GitHub Copilot Certification (GH-300) - Microsoft | [Credential](#)
- The Ultimate Job Ready Data Science Course – CodeWithHarry | [Credential](#)
- Agile Delivery Model – Foundational Course | [Credential](#)
- Ranked 36 - [GFG](#) | Solved 400+ DSA problem - [Leetcode](#) | 2 Star rating - [Codechef](#)
