

EDUCATION

- **Visvesvaraya National Institute of Technology, Nagpur** 2021–2025
B.Tech. in Mechanical Engineering CGPA: 8.45/10

EXPERIENCE

- **MetLife** | Software Engineer Aug'25–Present
Java, Spring Boot, React.js, DB2 Hyderabad
 - Migrated components of a legacy VB.NET monolith to Spring Boot microservices with React.js.
 - Unified iLink, CDF, and SoldCase into a centralized GCA platform to streamline internal workflows.
 - Designed and implemented RESTful services using Spring Boot with DB2 integration.
 - Built reusable React.js components and optimized data fetching for improved maintainability.
 - Improved customer onboarding workflows by modernizing backend processes.
- **Turing** | LLM Trainer Jul'25
C++, Algorithms Remote
 - Designed algorithmic benchmarks to evaluate reasoning capabilities of large language model.
 - Developed end-to-end problem pipelines with constraints, C++ reference solutions, and test cases.
 - Performed adversarial testing using edge cases to identify LLM failure patterns.
 - Built automated test generators to improve the efficiency and consistency of LLM evaluations.
- **Zeus Numerix** | SDE Intern May'24 – Jul'24
C++, Qt, QML Pune
 - Built cross-platform GUI applications using Qt (QML) and C++.
 - Delivered UI for PGK Simulation Software across Windows, Linux, Android, and Raspberry Pi.
 - Implemented reusable and responsive UI components using Qt Creator and Qt Design Studio.

PROJECTS

- **RAG-Based Video Learning Assistant** | Python, LLM, RAG Feb'26–Mar'26
RAG-powered system for context-aware video search
 - Engineered a RAG-based video learning assistant for semantic search and contextual Q&A
 - Built a transcript ingestion pipeline for a 45-video course using extraction, chunking, and retrieval indexing
 - Implemented bge-m3 embeddings and vector similarity search for content retrieval
 - Integrated LLaMA with retrieved context for grounded response generation
 - Optimized retrieval quality through chunk-merging and retrieval tuning
 - [GitHub](#) | [Demo Video](#)
- **AI-Powered News Research Assistant** | Python, LangChain Jan'26–Feb'26
AI-powered news research and semantic retrieval system
 - Engineered an AI-powered news research assistant for semantic search and contextual Q&A
 - Built a RAG pipeline using LangChain, OpenAI embeddings, and FAISS vector search
 - Implemented source-aware retrieval for grounded responses from news articles
 - [GitHub](#) | [Demo Video](#)

TECHNICAL SKILLS

Programming : Python, Java, C++, C, JavaScript, SQL
AI/ML : Generative AI, LLMs, RAG, Machine Learning, Deep Learning, NLP
Frameworks & Libraries : Spring Boot, React.js, LangChain, Scikit-learn, Pandas, NumPy
Databases : MongoDB, MySQL
CS Fundamentals : Data Structures & Algorithms, OOP, System Design, Computer Networks

CERTIFICATIONS & ACHIEVEMENTS

- GitHub Copilot Certification (GH-300) - Microsoft | [Credential](#)
- The Ultimate Job Ready Data Science Course – CodeWithHarry | [Credential](#)
- Agile Delivery Model – Foundational Course | [Credential](#)
- Ranked 36 - [GFG](#) | Solved 400+ DSA problem - [Leetcode](#) | 2 Star rating - [Codechef](#)
